## FARQUHAR'S BULBS FOR NATURALIZATION.

#### Abstract

THE increasing practice of planting bulbs extensively in the Rock Garden, Woodlands, Wild Garden and among Grass produces an effect which is nearer to nature than any other style of gardening.

Daffodils, Crocuses, Lilies, Trilliums, etc., growing amid such surroundings have a charm that is not to be found in the more conventional beds and borders of the cultivated garden. The following bulbous plants are especially suitable for natural plantationsand when once planted hold their own and increase with little or no further care.

A full description of the following varieties will be found in the body of the catalogue.

## FARQUHAR'S GIANT DARWIN TULIPS.

If by Parcel Post, add postage at zone rates; weight per 100, 7 lbs .

THE colors range from the palest lilac to purplish black, including shades of rose, crimson, violet, brown, white, etc. The Darwin Tulips are the strongest race of all, their massive leaves being often four inches broad and frequently grow two to three feet in height. They bloom with the Columbines, three or four weeks after the Single Early Tulips. Clumps of them along the edge of shrubbery and in hardy plant borders are very effective. They are especially beautiful when cut for vases. The figure following the name indicates the relative time of flowering. Those marked * are the best for forcing.

## FARQUHAR'S SINGLE MAY FLOWERING OR COTTAGE GARDEN TULIPS.

The May-Flowering Tulips are usually in full bloom about Memorial Day and generally last well into June. Not only do they prolong the Tulip season, but in grandeur of form and richness of their colors surpass most of the earlier classes. They are splendid subjects for natural plantations, for clumps in herbaceous perennial borders as well as for formal beds. For cutting they are even better than the early tulips-the flowers being stronger and lasting longer.

If by Parcel Post, add postage at zone rates; weight per 100, 7 lbs.

## DOUBLE TULIPS

If by Parcel Post, add postage at zone rates; weight per 100, 7 lbs.

AVERY ornamental and useful class, flowering usually about ten days or two weeks later than the Single Early Tulips. They are deservedly popular for bedding in both public and private grounds, the large pæony-like blossoms being highly decorative and of long duration.

Farquhar's Rainbow Mixture. This mixture is composed of the best named sorts of bedding Double Tulips, grown separately and put together in studied proportions, and contains a liberal allowance of the showy light colors. 50 cts. Per doz.; $\$ 3.50$ per $100 ; \$ 32.00$ per 1,000 .

Rembrandt Tulips.

Double Tulip, Murillo.

NAMED DOUBLE TULIPS.
Double Tulips should be planted one sort in each bed, as grouping different varieties does not produce such a good effect. The varieties marked 1 generally begin to flower the last week in April, those marked 2 about one week later, and the latest to bloom are marked 3. The figures following the names indicate the average height in inches. Those marked * are the best for forcing.

## FARQUHAR'S SINGLE EARLY TULIPS.

## If by Parcel Post add postage at zone rates; weight per 100, 7 lbs.

Tulips are such universal favorites that it is scarcely necessary to dwell upon their merits. In them we possess a range of colors and combination of shades which no other class affords; besides, the standard sorts are so reasonable in price that they can now be planted in quantity. For bedding, pot culture and forcing for cut flowers in Winter they are invaluable.
CULTURE. The cultural directions given for hyacinths on page 8 can be applied to Tulips, except that the bulbs being smaller must not be planted quite so deep. Four to five inches to the bottom of the bulb is deep enough and a distance of 4 to 6 inches between the bulbs is sufficient. They may be planted in October and November before the ground freezes. For pots, six to eight bulbs in a 7 -inch pan is very satisfactory.

Farquhar's Rainbow Mixture Single Early Tulips, at the Harvard University Botanic Garden, Cambridge, Mass.
FARQUHAR'S RAINBOW MIXTURE. The varieties included in this mixture are grown separately, and are all popular large-flowered bedding sorts of decided merit. The colors are carefully proportioned, and include white, yellow, pink, scarlet, crimson and many beautiful shades and combinations of these colors. The sorts are selected to flower at nearly the same time and with slight variation in height. For massed beds and grouping our Rainbow Mixture is unsurpassed. The bulbs offered are of the largest size and finest quality. 60 cents per doz.; $\$ 4.00$ per $100 ; \$ 38.00$ per 1,000.
SUPERFINE MIXTURE. Extra quality bulbs in many beautiful and varied sorts, flowering nearly together. 40 cents per doz.; $\$ 2.75$ per 100 ; $\$ 25.00$ per 1,000 .

## CULTURE OF HYACINTHS.

Hyacinths in Pots. It is important in the pot culture of the Hyacinth to have rich, light soil-if possible, a compost of one-third decayed turf, one-third old rotten cow manure, and the remainder equal parts of sharp sand and leaf-mould. This compost should be made a few weeks before being used. If the buibs are to be potted singly, pots five inches in diameter are the proper size, and the special Hyacinth pots which are about two inches deeper than ordinary pots, are preferable. For drainage, cover the hole in the pot with a piece of broken pot, and over this place a layer of moss. Break off any offsets which appear at the base of the bulbs, and in potting place each bulb so that its top shall be half an inch below the surface of the soil and an inch below the rim of the pot. The soil should be of usual natural moisture, and should be pressed moderately firm. The filled pots may be placed in a cold frame where there is protection from frost, and well watered. An excellent plan is to place them on a bed of moist, sifted coal ashes, covering the pots to a depth of six mches with the same material. When well rooted, which will be in about six weeks, the bulbs may be brought indoors and forced. For the first two or three weeks they should be kept in a temperature not exceeding 50 degrees. Success in forcing depends much on their having strong roots before being brought to the light. The top grows rapidly, and unless the roots are started much in advance they are unable to bourish the plant, and failure results. Hyacinths for early use may be potted in September or October; late planting is not advisable, as the
better to pot them in October and keep them in a cold frame above freezing until it is desired to force them into bloom.
better to pot tain dwarf foliage and fine flower spikes, Hyacinths when being forced should have plenty of manure-water, fresh air, and should be kept very near the glass. The blooms last much longer if shaded from the sun.

Hyacinths in the Open Garden. The ground should be dug to a depth of at least fifteen inches, and ebriched with plenty of well-rotted cow manure. Hyacinths may be planted from September until Winter sets in; although if the highest success is sought they should be in the ground by the end of October. Bulbs planted early develop roots in the autumn, and these, if protected from injury by freezing and thawing alternately during the winter, enable the bulbs to produce much larger flower spikes than if the roots are not developed until Spring. Frost reaching the bulbs raises them up, thus detaching them from their roots. Protection may be afforded by covering the beds with straw or leaves to a depth of six or eight inches, which should be removed early in the Spring. Hyacinths should be set six inches below the surface of the ground and six inches apart.

## FARQUHAR'S SELECTED NAMED BEDDING AND FORCING HYACINTHS.

## If by Parcel Post add postage at zone rates; weight per doz., 2 lbs.

This highly decorative class of Hyacinths is of unsurpassed excellence for producing fine color effects in public parks and private grounds. Being of distinct and decided shades, of almost uniform height, and blooming at the same time, they admit of the most artistic grouping. They are also very desirable for forcing singly in pots or grouped in bulb pans.

If by Parcel Post, add postage zone rates; weight per doz., 2 lbs.
These are well developed, sound flowering bulbs, superior in size and strength to the Mixed Hyacinth usually offered. They are specially adapted for groups in borders and informal beds, where they will give a brilliant display of very handsome flowers and on account of their low price are also extensively forced for Winter-blooming and cutting. Care is exercised to include only sorts which bloom at the same time and are of nearly uniform height.

## NAMED MINIATURE HYACINTHS.

These are most fascinating, both for forcing in pans and for out-door bedding, and are gaining in popular favor each year.

## EARLY ROMAN HYACINTHS.

These beautiful Hyacinths are indispensable to the florist in his Autumn and Winter cut-flower work; while to the amateur they are among the most easily cultivated and most satisfactory of flowering bulbs. The white variety, if planted early in September and gently forced, will bloom in November; the others require from two or three weeks longer.

When grown in pots or pans they are most effective planted in groups of six or more bulbs in each.

## CROCUSES

The bulbs should be set three inches deep and should be planted in October or early in November to insure success. They are very effective when combined with Daffodils, and other Spring flowers. For a natural effect they can be scattered in handfuls and planted where they lie. Crocuses may also be grown indoors either in pots or bulb pans in loam, or in dishes filled with wet moss in which the bulbs are set closely, half an inch below the surface.

## GLADIOLI GANDAVENSIS.

The following varieties are considered among the best for forcing under glass.

## AMARYLLIS.

In order to obtain fine specimens of Amaryllis, the following method should be observed: On receipt of the bulbs in the Autumn they should be placed where they will be always slightly moist and warm, under the benches of a greenhouse, for example; do not pot up the bulbs before the flower buds appear; when first potted give very little water, and promote growth by giving moderate bottom heat; increase the supply of water as the plants progress. Very often the mistake is made that bulbs are potted up too early; the consequence is that only leaf growth is made. The proper soil for Amaryllis is turfy loam enriched with rotted manure.

Hippeastrum, New Hybrids. (Vittata.) The finest race of Amaryllis in cultivation; exceeding in the size and fine form of their flowers, as well as in the diversity of colors and markings, all former hybrids. The segments are of nearly uniform size, giving the flowers a regular trumpet form

Each Doz.

Hallii. (Lycoris squamıgera.) Bright rosy-lilac flowers, fragrant, 3 or 4 inches across, blooms in August. The foliage appears in Spring, disappears in June, and is followed two months later by the naked flowers. Hardy if protected

## ANEMONES.

None of the Spring flowers surpass the Anemone in brilliancy of color and profusion of bloom. They are very lasting and are very popular for cut flower use and for table decoration. Plant in October or November, six roots in a six-inch pot or bulb pan covering them one inch. They may be kept in a cellar or frame protected from frost until Spring when they may be placed in the greenhouse or window to bloom.
Single De Caen. (Giant French Poppy-flowered.) These produce an abundance of very large flowers of brilliant and varied colors. 60 ets. per doz.; 84.00 per 100; $\$ 38.00$ per 1000 .

## CHIONODOXAS. (Glory of the Snow.)

One of the most beautiful dwarf blue Spring flowers resembling those of Scilla siberica but larger, slightly taller, and more handsome. The chionodoxa is very hardy, thriving in any ordinary garden soil and in almost any situation. The bulbs continue to flower from year to year. It is most satisfactory for wild garden and woodland planting, also excellent for forcing.

Gigantea. Large blooms of soft gray-blue
Luciliæ. Bright sky-blue flowers, with large white centres

## LILIES FOR THE OPEN GROUND.

## If Lilies are wanted by mail, add 5 cents each.

Special Notice. Many of the late flowering Lilies cannot be shipped from Japan until October, and to save our customers the annoyance and expense of shipments as they mature, we have decided to send all the early varieties, approximately September 15-30. The late sorts, being subject to delays of steamers, etc., will be forwarded early in November, or as soon thereafter as they arrive. We advise the preparation of the Lily-beds or borders early in Autumn, covering them with four to six inches of leaves or other litter, to prevent the ground freezing until the bulbs arrive. The late sorts comprise the following: Auratum, Batemanni, Henryi and Speciosum. Lilium Candidum will be shipped on arrival, as it is essential that they should make a Fall grouth to insure perfect blooms the next season.

Lilium auratum.

Auratum. (Golden-rayed Japanese Lily.) Flowers 6 to 8 in. in width, pure white, with a wide band of gold running through the centre of each petal and numerous crimson spots.
Mammoth Bulbs.

## Extra Large Bulbs.

Batemanni. A most beautiful Japanese variety, growing 3 ft . high with 6 to 8 apricot-colored flowers on a stem; blooms in July and August
Browni. Large trumpet-shaped flowers, interior pure white; exterior purplish-brown; very beautiful.

Lilium Regale. (The Regal Lily.) Mr. E. H. Wilson, the famous plant collector, collected for us the original bulbs, in North-Western China. He considers this the finest of all Lilies. It is absolutely hardy, and is excellent for forcing. It has been predicted that this will become the Easter Lily of the future, and being so hardy, may be grown at home. The flowers are white, slightly suffused with pink, with a beautiful shade of canaryyellow at the centre, and extending part way up the trumpet. It is delightfully perfumed, reminding one of the Jasmine, and lacking the heavy, oppressive odor of most Lilies. Blooms out-of-doors early in July. Awarded a Gold Medal by the Massachusetts Horticultural Society, and a first-class certificate by the Royal International Exhibition, London, 1912. (Bulbs ready in October.)
Flowering Bulbs. $\$ 1.00$ each; $\$ 10.00$ per doz.; $\$ 75.00$ per 100 .

## LILIES FOR FORCING.

## If wanted by mail, add 5 cents each.

The bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf mold, rotten cow manure and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain until started eight inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break away the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil from becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.
LILIUM CANDIDUM. (Ascension or Madonna Lily.)
These are grown for us in France, and are the large variety, with pure white flowers; excellent both for forcing and open garden. Mammoth Bulbs. 35 cts. each; $\$ 3.75$ per doz.; $\$ 30.00$ per 100 . Extra Large Bulbs. 30 cts. each; $\$ 3.00$ per doz.; $\$ 24.00$ per 100 .

are best for producing natural effects. They thrive in moist soil or where there is partial shade, and for such situations no flowers are more satisfactory. Once planted, they care for themselves. The shrubbery is an ideal place for Lities.
their flowers coming when most of the shrubs are out of bloom. Lilium Superbum, Canadense and Philadelphicum are suitable for shrubbery planting as well as the Elegans varieties and Tiger lilies. These should be planted in clumps, the bulbs 6 to 8 inches deep and 6 inches apart.

## THE ARISTOCRATS OF THE PAEONIES. <br> EIGHT MAGNIFICENT NEW VARIETIES.

Pæony Agnes Keogh

THE results achieved by years of labor and crossing with the very finest Pæonies then in existence by the late Mr. James Farquhar. In these new varieties there can be traced the finest strains of the French and Richardson types.

These varieties are of the highest quality, large size, strong, erect habit and are all more or less scented. Distinguished by their fine form and coloring. They have been highly commented upon by experts who have seen them, and who claim that they will rank with the very choicest varieties that as yet have been introduced.
We were awarded a Silver Medal by the Massachusetts Horticultural Society for our fine collection. Also first Prize for the finest and largest Pæony in the Show (one of our seedlings).
As our stock of these varieties is limited, orders will be filled strictly in rotation.

## FARQUHAR'S GOLD-MEDAL PAONIES.

The Gold Medal of the
Display of Pæonies, June, 1913.
S
EPTEMBER is the best month in which to plant Pæonies, as they then make a root growth before Winter and bloom next Spring, thereby gaining a whole year, as Spring plantings will not flower until a year later.
They require a good rich, deep soil and an abundant supply of water during the growing season. When enriching the ground the use of too much fresh manure near the roots should be avoided. An important point to observe is not to plant too deep. The roots should be planted so that the eyes will be 2 to 3 inches below the surface. Too deep planting is a frequent cause for shy flowering.

The figure following the name indicates the relative time of flowering.

Baroness Schroeder. 2. Very large double globular flowers, blush-pink, shading to white. Very vigorous, free bloomer. One of the best. $\$ 2.00$ each.

## HARDY PERENNIAL PLANTS.

## OLD-FASHIONED HARDY GARDEN FLOWERS.

THE favorites of the old-time gardens are coming to the front, and deservedly so. No feature of the garden can be more satisfactory than a well-arranged Hardy Plant border, producing from April to November a continuous succession of charming flowers, much more interesting than the usual greenhouse assortment, and equally valuable for garden embellishment and cutting purposes. The Hardy Plants have the advantage of greater permanency, requiring only cultivation, enriching, a slight mulch during Winter, and occasional checking of the more robust growers to keep the plantation in good condition for years.

We limit the present list to varieties which admit of being planted at this season and which have been found generally hardy and desirable for the severe climate of New England.

Single plants of Hardy Perennials will be furnished at the following rates. Plants priced at $\$ 1.50$ per dozen, 20 cents each; plants $\$ 1.75$ and $\$ 2.00$ per dozen, 25 cents each; plants at $\$ 2.50$ per dozen, 30 cents each; plants at $\$ 3.00$ per dozen, 35 cents each.

Aristolochia sipho. Dutchman's Pipe.

CELASTRUS orbiculatus. (Japanese Bittersweet.) A rampant climbing shrub, having luxuriant green foliage, and in Autumn becoming literally covered with bright yellow fruits, which soon open and disclose the scarlet seeds within. This and the native variety C. Scandens are valuable for covering banks or rocky ground and for producing naturalistic effects. 60 cts . each; $\$ 6.00$ per doz.
scandens. (Bittersweet Roxbury Wax Work.) Ovate, glossy green foliage, turning bright yellow in the Autumn. Showy, drooping clusters of orange fruits in Fall, and clinging to the branches throughout the Winter. 50 cts each; $\$ 5.00$ per doz.
CLEMATIS. It is preferable to plant Clematis in Spring.
EUON YMUS radicans. Japanese evergreen trailer with dark glossy green, dense foliage. A moderate climber, particularly desirable for clothing the foundations of houses and rockwork. This plant has been found most satisfactory for edgings and miniature hedges in formal gardens, being much more hardy than Box-wood. 40 cts . each; $\$ 4.00$ per doz.; $\$ 30.00$ per 100 .
radicans variegata. A rare form with foliage handsomely variegated with green, silver and pink. 50 cts . each; $\$ 5.00$ per doz.; $\$ 35.00$ per 100.
radicans vegetus. (Large-leaved Trailing Euonymus.) This is a most valuable ground-covering evergreen plant, with rich deep green foliage, thriving in partial shade or under trees where grass and other plants fail. It is also our best hardy evergreen vine, retaining its foliage through the Winter, even when exposed to the sun. 60 cts. each; $\$ 6.00$ per doz.; $\$ 40.00$ per 100.

Kewensis. A splendid trailing evergreen plant, useful for the rock garden or for carpeting the ground. The small oval foliage is dark green in color with lighter veins; a very pretty variety. 50 cts. each; $\$ 5.00$ per doz.; $\$ 35.00$ per 100 .

HYDRANGEA petiolaris. (Wilson.) This splendid hardy climber, hitherto has been but little known, although it was introduced from Japan a generation ago. Once established, it climbs rapidly, clinging by its little rootlets like English Ivy. The foliage is bright green, quite massive and numerous flat flower cymes are produced which average 8 to 10 inches in diameter. The flowers are white, coming in the early Summer. $\$ 1.00$ each; $\$ 10.00$ per doz.

chinensis alba. (White Wistaria.) $\$ 1.50$ each; $\$ 15.00$ per doz.

## HARDY CONIFERS.

We do not advise planting Evergreens later than October 1st, in New England. We only offer varieties suitable for Fall Planting.

## PICEA GLAUCA ALBERTIANA VAR. CONICA. (Illustrated above.)

Collected by the Arnold Arboretum near Laggan, Alberta, and described by them as follows: This very peculiar form of the Western White Spruce is of slow growth and forms dense bushes of narrow conical shape, consisting of closely packed, thin and short branchlets. The leaves are very different from the type and quite distinct. They are radially disposed around the stem, thin and slender. Picea glauca albertiana var. conica, on account of its very characteristic habit and aspect, promises to become one of the most favorite dwarf spruces; a rare and vaulable plant.

## NEW CHINESE SPRUCES INTRODUCED BY THE ARNOLD ARBORETUM.

Picea asperata var. ponderosa. This handsome variety is remarkable for its large cones.
Picea Balfouriana. One of the tallest of the Chinese Spruces.
Picea montigena. The short, stout bristly leaves are of shining green and more or less glaucescent.
Picea retroflexa. Glaucous foliage in somewhat spiral arrangement. Very interesting.

Picea asperata. A quadrangular-leaved Spruce from northwestern China. Some of the trees are very glaucous in appearance, hence the colloquial name Yun sha (Cloudy Fir). Old trees are very spire-like in outline. All the varieties of P. asperata are of dense growth, and the purplish coloring of the young foliage makes them strikingly beautiful in the early Summer.
Picea asperata var. notabilis. This variety differs from the preceding chiefly in the cones, the scales of which are rhombicovate in outline.
Strong Plants of the above varieties, each $\$ 1.50$. Collection of 6 varieties, $\$ 7.50$.

## Farouhar's Evergreen Lawn Grass.

FARQUHAR'S EVERGREEN LAWN GRASS
is a mixture of the finest American and European grasses adapted to lawn-making. The formula for this mixture is the result of a life-time of practical experience in making and maintaining lawns. Neither pains nor expense are spared in obtaining grasses of high vitality and purity. It is our constant aim to make Farquhar's Evergreen Lawn Grass the best, purest and most permanent Lawn Grass sold. For the formation of new lawns not less than 5 to 6 bushels per acre. One quart will sow a plot $15 \times 20$ feet or 300 square feet. For renovating existing turf, use one-half this quantity. Price per quart, 35 cents (by mail, 40 cents); 4 quarts, $\$ 1.25 ;$ peck, $\$ 2.00$; bushel of $20 \mathrm{lbs} ., \$ 7.50 ; 10$ bushels, $\$ 72.00$.

## FARQUHAR'S BOSTON PARKS LAWN SEED.

This formula has been used for many years in the Boston Park Department and in the Metropolitan Parks of Massachusetts. It is unquestionably one of the best mixtures for work or where a free-growing, hard-wearing turf is desired. Sow not less than 64 lbs. per acre and in many cases 86 lbs . will be an advantage. Price, 60 cents per lb. (by mail, 65 cents); $10 \mathrm{lbs} ., \$ 5.00 ; 100 \mathrm{lbs} ., \$ 45.00$. 25 lbs. and upwards at the $100-1 \mathrm{lb}$. rate.

## FARQUHAR'S GRASS SEED MIXTURE For PUTTING= GREENS.

The hardiest and finest low-growing Grasses are contained in this Mixture. It produces a beautiful and lasting green turf calculated to withstand hard tear and wear. Qt., $50 \mathrm{cts}$. ; by mail, $55 \mathrm{cts}$. ; pk., $\$ 2.75$; per bush. of 20 lbs ., $\$ 10.00$.

## FARQUHAR'S GRASS SEED MIXTURE For TERRACES.

A mixture of strong, deep-rooted Grasses for banks or terraces. Although the Grasses are strong and deep-rooted, they will produce a fine green velvety surface, and also prevent washing away during heavy rains. Qt., 50 cts.; by mail, 55 cts.; pk., $\$ 2.50$; per bush. of $20 \mathrm{lbs} ., \$ 9.00$.

## FARQUHAR'S FAIR GREENS MIXTURE.

This is composed mainly of perennial native Grasses and two very important European Grasses which have proven of great value for FairGreen use. They are all of dwarf, spreading growth, forming a close velvety surface which improves from year to year if given proper care. It contains no clover, which is objectionable on account of making the surface slippery. If white clover is desired, the quantity sown should not exceed one-half pound per bushel of grass seed. Sow 100 to 150 lbs . per
acre. Per lb., 50 cts.; per 100 lbs., at 48 cts . per lb.; per $1,000 \mathrm{lbs}$., at 45 cts . per lb.

## FARQUHAR'S GRASS SEED MIXTURE For TENNIS COURTS.

A mixture of fine Grasses, consisting of those varieties which are adapted to produce a close elastic turf. Qt., $45 \mathrm{cts}$. ; by mail, 50 cts. ; $\frac{1}{3}$ pk., $\$ 1.35$; pk., $\$ 2.50$; per bush. of 20 lbs ., $\$ 9.00$.

## FARQUHAR'S GRASS SEED MIXTURE For SHADY PLACES.

This is a mixture of extra fine Grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses on account of shade have failed to make a close sward. Qt., 50 cts.; by mail, $55 \mathrm{cts} . ;$ pk., $\$ 2.50$; per bush. of $20 \mathrm{lbs} ., \$ 9.00$.

## FARQUHAR'S GRASS SEED MIXTURE For SEASHORE.

A combination of various dwarf deep-rooted Grasses adapted for lawns near the salt water. The seeds should be sown early in the season, so that the young plants may be well established before warm weather. Use at the rate of one quart for 200 square feet; 5 to 7 bushels per acre. Qt., 40 cts.; by mail, $45 \mathrm{cts}$. ; pk., $\$ 2.25$; per bush. of $20 \mathrm{lbs} ., \$ 8.00$.

## FARQUHAR'S SPECIAL GRASS MIXTURES.

## Prices Subject to Market Fluctuations.

These contain only the most suitable Grasses, the proportionate quantity of each being regulated by soil, situation and purpose for which desired. The object to be attained is a constant, successive growth of rich pasturage from Spring until Fall. It is a well-established fact that soil sown with a variety of different grasses which are adapted to the soil, and which attain perfection at alternate months from April to September, produce very much larger and more satisfactory crops, both for hay and pasturage, than when only one or two kinds of grasses or clovers are sown. The good results obtained from our Special Grass Seed mixtures are demonstrated by the constantly increasing demand for them. Fall seeding is preferable, but Spring sowing will be successful if done early, while the land is cool and moist. In addition to the Grasses, we advise sowing 10 lbs. of Mixed Clover Seed per acre. Clover seed should be sown separately as it is heavier than Grass seeds and settles at the bottom when mixed with them, and in consequence is likely to be sown unevenly. Clovers in their young state are tender in our climate, and should therefore be sown in Spring.

Pastures sown with these Permanent Mixtures should last indefinitely if given a frequent topdressing of manure or fertilizer, maintaining their cropping qualities throughout the entire season.

## FARM AND FIELD GRASSES.

Prices Subject to Market Fluctuations.

Mammoth Red Clover.

Red or Creeping Fescue. (Festuca rubra.) A splendid grass for light sandy soils. Extreme drought resister. Valuable in seeding banks and exposed locations, binding drifting sands, and as lawn grass for shady spots. Forms a very close, durable turf, suitable for putting greens. Per lb., $\$ 1.10 ; 100 \mathrm{lbs}$., $\$ 100.00$.
Red Top. (Agrostis vulgaris.) A good permanent grass, which grows naturally in cold wet soils. It should be grown in cultivation in similar situations. A perennial with long creeping stems and underground runners; one of the best bottom grasses, bearing large numbers of fine root leaves, making it invaluable for sowing with erect tufted Grasses, such as Orchard and Timothy, filling in between the clumps and producing a continuous turf. Sow four bushels per acre if alone. ( 10 lbs. per bushel.) Per lb., 25 cts.; per bush., $\$ 2.35$; 100 lbs., $\$ 22.00$.
Red Top. Clean Seed. Chaff and weeds sifted out; pure fancy seed. We recommend this to all who desire the best results, as its absolute purity and excellence insure satisfaction for farm, park or lawn. Excellent for restoring worn-out swards. Per lb., 40 cts.; 100 lbs.. $\$ 38.00$.
Sweet Vernal, True Perennial. Many seedsmen substitute the annual variety for this invaluable Grass, as the seed for both is similar. Invaluable in lawns on account of its very early growth and fragrant odor, which it imparts to the other grasses in drying. Remains green very late. Hardy and permanent. Per lb., $\$ 1.50$
Tall Oat Grass. (Avena elatior.) A perennial which grows in loose tufts, and throws up an abundance of leaves and tall stalks. Succeeds best on rich upland soils, and when once established is a great drought resister. Early. Makes its heaviest growth the second year. Per lb., 65 cts; $100 \mathrm{lbs} ., \$ 60.00$.
Timothy or Herds Grass. (Phleum pratense.) This Grass is usually considered and treated as a short-lived perennial, and hence is the best grass to grow in a short rotation. It succeeds best on moist loams and clays naturally rich in humus or on those which have been heavily manured. It grows in loose tufts, with few short leaves, so that Red Top or Red Clover should be sown with it to furnish heavy bottom growth of leaves. Sow one bushel per acre if alone. ( 45 lbs . per bushel.) Per lb., 18 cts ; per $100 \mathrm{lbs} . \$ 15.00$. Wood Meadow. (Poa nemoralis.)

Well adapted for growing under trees and in shaded situations. Dwarf and fine-growing. Sow two and a half bushels per acre. (14 lbs. per bushel.) Per lb., $\$ 1.50$.

## CLOVERS.

## Prices Subject to Market Fluctuations.

Red Medium. (Trifolium pratense.) The best clover for all practical purposes. . Succeeds best on rich, warm loams, containing humus. Lime and potash are essential for its best development. A biennial, but by close pasturage may be made to last several years. Per lb., 50 cts.; 100 lbs ., $\$ 45.00$.
Mammoth or Large Red Northern. (Trifolium pratense.) On rich, loamy soil this variety grows nearly twice as large as the Medium Red Clover and earlier to start a Spring growth. Per lb., 50 cts.; 100 lbs., $\$ 45.00$.
Alsike or Swedish. (Trifolium hybridum.) This Clover will thrive where the soil is quite wet, and will even stand flooding without being killed. Productive and sweet and extremely valuable for both pasturage or soiling. The flowers afford a fine pasturage for bees. Per lb., 45 cts.; 100 lbs., $\$ 40.00$.

White Clover. (Trifolium repens.) This Clover should always be sown on permanent or temporary pastures. Will grow on any soil, but especially adapted to low meadows, where the surface soil is mellow and rich. Ordinarily will not last more than two years on hard or shallow soil. Sweet and nutritious. Per lb., 90 cts.; $10 \mathrm{lbs} ., \$ 8.50$.
Alfalfa or Lucerne. (Medicago sativa.) The chief merit of Alfalfa is the fact that it can be cut three or four times in a season. The soil should be deep, rich and well-prepared. It does not succeed on compact clay, nor on land with impervious sub-soil. The roots shoot downward until they are ten or fifteen feet below the surface, and will therefore resist the driest weather. Per lb., 45 cts.; $100 \mathrm{lbs} ., \$ 38.00$.

## FIELD SEEDS.

Sand Vetch, or Hairy Vetch. (Vicia villosa.) This annual is a native of Western Asia, and has been cultivated in this country and Europe for about fifty years. Its desirability as a forage crop has become established and it is being cultivated each year on a more and more extensive scale. It should be sown at the rate of from four to six pecks per acre, broadcast or in drills, from August 15 to October 1, and with it as a supporting crop to raise the vines up off the ground there should be planted from two to four pecks of Winter Wheat, Oats or Rye. It should be cut while the Vetch is in full bloom. It may be planted in Spring in order to supply an early green crop for soiling purposes, or in midsummer for late Autumn forage. Peck, $\$ 4.50$; bush., ( 60 lbs .) $\$ 16.00$.

Rye, Fall or Winter. The time for sowing is from the middle of August to the last of September. Prepare the ground as for Wheat and sow broadcast, or with a drill at the rate of one and one-half bushels per acre. This has no equal as a crop to be used for late Fall and early Spring pasture, and is one of the best to turn under for green manure. ( 56 lbs per bushel.) Per bush., $\$ 3.50$; 10 bush., $\$ 32.00$.

Winter Wheat. ( 60 lbs per bushel.) $\$ 4.00$ per bush.

# FARQUHAR'S POT-GROWN STRAWBERRY PLANTS 

Cultural Directions. The Strawberry is easily cultivated: abundant crops can be obtained from a variety of soils differing widely in character, from a light sand to a heavy clay. The best soil is a deep sandy loam, but any soil suited to the growth of ordinary field or garden crops may be trusted to successfully grow the Strawberry. The scil should be broken up and pulverized by spade-trenching or subsoil-plowing, enriching with good stable manure to a depth of fully two feet, the quan of the the condition of the scil. The plants may be set in beds of three rows one foot apart and one foot distant in the rows, with a space of two and a half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

## TWO NEW VARIETIES OF STRAWBERRIES

Raised from seed by the late S. D. Warren, of Weston, Mass., and claimed by him to be as near rust-prooj as possible, with fruit far superior to the older sorts.
Arabine. Extra early, very large, bright red, of high quality, heavy cropper and vigorous grower. Roosevelt. A vigorous mid-season variety, larger than Marshall, of superior color and quality. Pot-grown plants of the above two "New Varieties"' $\$ 1.25$ per doz., $\$ 8.00$ per 100 .

## FARQUHAR'S "SELECT'’ VARIETIES OF STRAWBERRIES. EARLY.

Campbell's Early. One of the earliest berries, unusually productive; fruit large and of beautiful rich red color
Excelsior. This is undoubtedly one of the finest early Strawberries; fruit is of attractive conical form, bright red in color, and of delicious, mildly acid flavor.
Glen Mary. Large conical berry, bright red in color, and finely flavored.
Senator Dunlap. The fruit is large, dark red clear to the center, of very rich flavor. Does not readily rot on the vines.

## MEDIUM

Marshall. The fruit of this remarkable sort is enormous, of handsome, glossy dark crimson color, and of delicious, unexcelled flavor. As it does not thrive in all soils it should not be planted extensively until its adaptability is ascertained.
Abington. A strong growing variety of recent introduction; fruit is of large size and deep red in color, very solid and excellent flavor.
Early Jersey Giant. A new medium early variety with cone-shaped fruit of deep crimson, having a delicious aromatic flavor.
Brandywine. A large heart shaped berry, of perfect form, firm and bright red clear through, and pleasing spicy flavor; it is a great cropper and generally succeeds everywhere.

## LATE.

Gandy. This popular old variety is more largely grown than any other late sort. It is large, well formed, deep red and agreeably flavored; requires a fairly heavy soil.
Chesapeake. Vigorous grower with fruits of dark red color and rich spicy flavor
Commonwealth. The latest of all Strawberries, bearing large conical crimson fruit, extremely sweet and of delicious flavor. It is solid, quite juicy, and productive.

Pot-grown plants of the above "Select Varieties" $\$ 1.00$ per doz., $\$ 7.00$ per $100, \$ 60.00$ per 1000 $(250$ or over at 1000 rate.)

FALL-BEARING STRAWBERRIES.
A fine late crop may be assured from this class of Strawberries by keeping the blossoms picked off the plants until July, and cutting away the runners during the summer.
Superb. One of the best of this class, the fruit being deep red, firm, and finely flavored.
Progressive. This variety produces an abundance of fruit, deep red in color, of good size and flavor.
Pot-grown plants of the above "Fall-bearing Varieties" $\$ 1.25$ per doz., $\$ 8.00$ per 100.
